

All Chord Extensions (9, 11, 13)

Julian Bradley
JazzTutorial.com

Your challenge: Learn to accurately add any chord extension above any chord (9th, 11th, 13th, b9, #9, #11, b13).

Difficulty level = Medium

Chord extensions are the 9th, 11th and 13th. They can be added to any type of chord (maj 7, min 7, V7, etc).

However, chord extensions are always built from the MAJOR SCALE (even if the chord is minor, V7, or other).

To add a chord extension, construct a major scale starting from the chord's root and then walk up the notes until you find the extension.

(2 = 9, 4 = 11, 6 = 13)

Cmaj7 C major scale

PIANO

2 = 9th

(Any C chord - same for Cm7, C7, etc)

Cmaj7 C major scale

4 = 11th

(Any C chord)

Cmaj7 C major scale

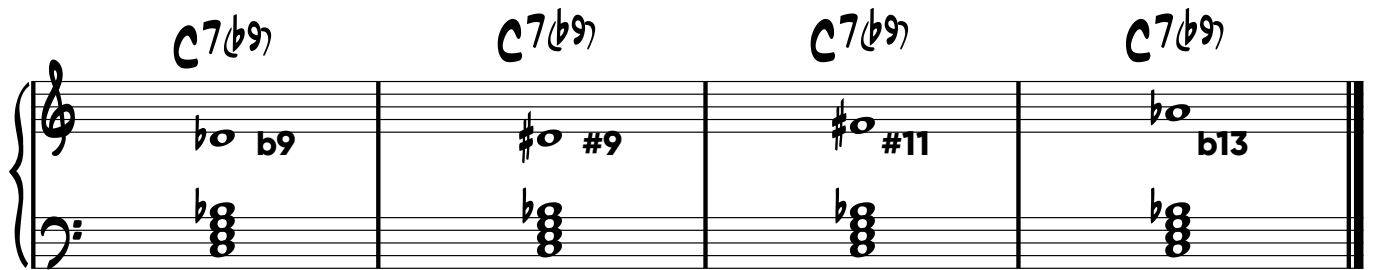

6 = 13th

(Any C chord)

Altered chord extensions:

Each of these three extensions (9, 11, 13) can be sharpened or flattened. These are called 'altered chord extensions'.

There are only four altered chord extensions, and these almost always appear above V7 chords (dominant 7 chords):

To find any chord extension (natural or altered) you must:

1. Run up the major scale (find the natural extension first: 9, 11 or 13).
2. Then sharpen or flatten it (if the chord says 'b9' '#9' '#11' 'b13') - like this:
