

It's common to change scale over the V7 chord of a ii-V-I (in this case, G7).

My favorite V7 scales are the **diminished** and **altered** scales, which have the most number of altered notes:

#7 **Dm7** C major scale (D dorian): **G7** **G diminished scale** (half-step / whole-step). Let's you play the flat 9, sharp 9 & sharp 11: **Cmaj7** C major scale:

This ii-V-I starts 'IN' the scale (notes from C major)...

Then goes 'OUT' of scale (notes from G diminished)...

Then ends back 'IN' the scale (C major).

#8 **Dm7** **G7** **G diminished scale:** **Cmaj7**

#9 **Dm7** **G7 ALT.** **G altered scale** (think 'Ab melodic minor') **Cmaj7**

#10 **Dm7** **G7 ALT.** **G altered scale** (think 'Ab melodic minor') **Cmaj7**

#11 A 'sequence' is a repeating melodic shape that moves upwards or downwards:
